

## Use of Agri-Waste Technology’s Validation/Verification Opinions in Their Entirety

Validation and verification of GHG offset statements can result in responsible parties making reference to the findings, conclusions, reports, and opinions expressed by Agri-Waste Technology. Responsible parties may make reference to statements within our validation/verification reports as long as Agri-Waste Technology is properly referenced. If a “short-form” reference to a validated/verified statement is made, the responsible party must also include or make reference to a “long-form” reference. Example formats are shown in the following table.

Acceptable references for validated/verified GHG offset statements/opinions

| Subject matter is     | Short form                                    | Long form                                                                                                                                                                    |
|-----------------------|-----------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Historical in nature  | “Verified at a reasonable level of assurance” | “In its opinion dated XX-XX-XXXX, Agri-Waste Technology, Inc. concluded with reasonable assurance that the data and information in our statement were materially correct.”   |
| Projected or forecast | “Validated”                                   | “In its opinion dated XX-XX-XXXX, Agri-Waste Technology, Inc. concluded that the project meets eligibility requirements and will likely result in the asserted GHG offsets.” |
